AMENDMENT(S) TO THE SPECIFICATION

Paragraph numbers listed below refer to the paragraph numbering in corresponding U.S. Patent Publication No. 2004/0265105 A1.

At page 3, after the last line describing Figs. 3 a-f, (after paragraph [0014]), please insert the following new paragraph:

Figs. 4a and 4b illustrate, respectively, schematic representations of the modular transport system including a construction equipment container and a cable drum system.

At page 4, (paragraph [0017]) please amend the third paragraph as follows:

The front subassembly 20 and the rear subassembly 22 are built in a self-contained manner, and preferably capable of being raised and lowered, whereby by raising the subassembly it is possible to couple and/or lock the construction machine. Such raising and lowering could be performed, for example, by means of a mechanical system employing, for example, air cushioning or hydraulic cushioning 40, as shown in Fig. 2 in a manner not illustrated here.

At page 5, between the last paragraph and the next to last paragraph (i.e., between [0023] and [0024]) please insert the following new paragraph:

Referring now to Figs. 4a and 4b, the modular transport system can include, coupled to the front subassembly 28 and the rear subassembly 30, a construction container or construction equipment carrier 42, or a cable drum system 44.
